

■ PathFundAI

AI-Powered Career Roadmaps, Funding Proposals, and Blockchain Credentials

■ *Project Overview*

PathFundAI helps students plan and fund their educational journey by generating personalized MDC-based career pathways, verifying milestones through Solana NFTs, and auto-drafting scholarship or grant proposals using Gemini AI. It empowers learners to visualize goals, showcase achievements, and secure funding seamlessly.

■ *Problem & Solution*

Students face unclear academic routes, lack verified progress tracking, and struggle to craft funding proposals. PathFundAI solves this by: • Generating AI-driven educational roadmaps (Gemini) • Issuing blockchain-based NFT credentials (Solana) • Automating professional proposal generation (ENTEC Challenge)

■ *Key Features*

■ Career Path Generator	Gemini API creates structured timelines from MDC to target careers.
■ NFT Badges	Solana mints proof-of-completion certificates for finished milestones.
■ Scholarship Matching	Suggests funding opportunities aligned with student pathways.
■ Grant Proposal AI	Gemini analyzes RFPs and generates professional proposals from templates.

■ ■ *Technical Architecture*

Frontend: React + Tailwind (deployed via Cloudflare Pages) Backend: Cloudflare Workers (Gemini + Solana API integration) AI: Google Gemini 1.5 Pro for reasoning and text generation Blockchain: Solana Web3.js + Phantom Wallet for credential NFTs Storage: Cloudflare KV or D1 for caching user data and proposals

■ *Sponsor Alignment*

• Miami Dade College — Career roadmap generation • ENTEC — Automated scholarship proposal generation from RFPs • Solana — Proof-of-completion NFT credentials • Google Gemini — AI reasoning and grant writing • Cloudflare — Serverless global deployment & caching

■ *Expected Impact*

Students gain clarity, verified digital achievements, and professional-quality funding proposals—all within one seamless platform bridging education, funding, and trust.
